The screenshot shows the AWS CloudWatch console. The top chart displays two metrics: CPUUtilization (blue line) and NetworkIn (orange line). The NetworkIn metric shows a significant spike at 16:30, reaching a value of approximately 1.33M. Below the chart, a table lists various metrics for the 'Saksham-GLA-Assignment' instance.

	Multi source query	Graphed metrics (2)	Options	Source

The screenshot displays the AWS CloudWatch Alarms console. The left-hand navigation pane includes sections for 'CloudWatch', 'Favorites and recents', 'Ingestion', 'Dashboards', 'Alarms' (with a count of 1), 'GenAI Observability', 'Application Signals (APM)', 'Infrastructure Monitoring', 'Logs' (with a 'New' button), 'Metrics' (with sub-links for Query Studio, Classic metrics, Explorer, and Streams), and 'Network Monitoring' (with a 'View monitors' link). The main content area is titled 'Alarms (1)' and features a search bar, a 'Quick filters' dropdown, and buttons for 'Clear selection', 'Create composite alarm', 'Actions', and 'Create alarm'. Below this is a table with the following columns: Name, State, Actions, Actions muted, Last state update (UTC), and Conditions. A single alarm is listed: 'Saksham-GLA-Alarm' with a state of 'OK', no actions, and a last state update of '2026-09-16 16:57:45'. The condition is 'CPUUtilization > 70 for 1 d minutes'. The bottom of the image shows the Windows taskbar with various application icons and the system clock indicating 22:30 on 16-09-2026.
